

BEDDING FLINGER

LENGTH

Up to 4.9 m

WALL HEIGHT

Up to 1.5 m

OPENING WIDTH

Up to 203 cm

VOLUME

Up to 12.3 m

CAPACITY

Up to 18,144 kg

The **NEWLY REDESIGNED** JBS Bedding Flinger is a versatile and powerful tool for bed preparation. This innovative machine is designed to bed with sand, sawdust, or green bedding, giving users the flexibility to choose the most suitable material for their needs.

The Pull-Type Bedding Flinger is equipped with a heavy-duty 88K chain, ensuring durability and reliability even in demanding conditions. The hydraulic front door allows for precise control of sand flow, enabling users to achieve the desired bedding thickness with ease.

To further enhance performance, the Pull-Type Bedding Flinger is equipped with a high-torque motor, providing increased power and reliability. This ensures that the machine can handle heavy workloads and deliver consistent results.

One of the standout features of the Pull-Type Bedding Flinger is its bi-directional belt function. The heavy-duty belt can operate in both directions, allowing users to spread bedding material efficiently and effectively. This versatility saves time and effort, making the bedding process more efficient.
